

## Information related to the “Business to Business” Interface (B2B) with Elia B2B Nomination system

ELIA's scheduling system proposes a “Business to Business” interface (B2B) using CIM XML message transfer between the Elia B2B nomination system and the BRP'S IT infrastructure.

This solution enable BRP's to develop software to generate directly from their databases to schedules to be submitted to the Elia B2B nomination system and/or to retrieve information from the Elia B2B nomination system.

Please find hereafter the link to the Documentation for the “Business to Business” CIM Interface (B2B): [Enomination B2B CIM.pdf](#) (see attached documents)

This Document presents information on HTTP protocol CIM format message. Furthermore, message specification and links to XML Schema documents (XSD) are also available.

Furthermore, a “Message Generation tool” is available: This is an educational tool that can be used in order to generate example of CIM XML messages: [MessageGenerationTool.xlsm](#) (see attached documents)

Please note that:

- DTD are not available. Only XSDs.
- Previous B2B component such as libraries NxPROB2BMsg.dll, NxPROB2BMsg.jar or xmlstruct.jar are no longer supported
